Objective

Seeking a full-time Data Scientist/Applied Scientist role to drive actionable insights and deliver business impact. MS in Computer Science with industry experience in predictive modeling and research in Responsible AI. Experienced in developing personalized recommendation systems and managing business intelligence dashboards to ensure data integrity.

Education

Georgia Institute of Technology

Master of Science in Computer Science (GPA: 3.87/4.00)

Aug 2024 – Dec 2025

Atlanta, GA

Georgia Institute of Technology

Bachelor of Science in Computer Science (GPA: 3.72/4.00)

Jan 2022 – May 2024

Atlanta, GA

Technical Skills

Programming Languages: Python, SQL, PySpark, Scala, R, Java, JavaScript

Machine Learning: Scikit-learn, Pandas, NumPy, Azure AI Foundry, Azure OpenAI, TensorFlow/PyTorch

Data Visualization & Tools: Tableau, Power BI, Matplotlib, Seaborn, Excel, D3.js, Adobe Analytics, Git, Jira, Confluence

Cloud & Big Data: Azure (CosmosDB, SQL Database), AWS (S3, RDS), Hadoop, MongoDB, Docker, GCP, MySQL, PostgreSQL

Work Experience

Graduate Research Assistant

Feb 2025 – Present

Social Dynamics and Wellbeing Lab (Supervisor: Prof. Munmun De Choudhury)

Atlanta, GA

- Investigated harmful bias patterns within LLM jailbreak responses to advance model safety and Responsible AI practices
- Developed new safety evaluation metrics by quantifying the lexical and structural patterns of bias in over 10K+ responses, revealing a **42%** variation in output consistency across groups
- Evaluated the safety of various LLMs with a multi-model system, achieving a **0.65** F1-score against human-annotated ground truth

Data Scientist Intern

Jun 2025 – Aug 2025

LG (Telecommunications)

Seoul, South Korea

- Developed a novel spatiotemporal context-aware web/app recommendation system on a Docker-based MLOps platform, integrating DyCARS and HGT models to address the limited coverage of history-based approaches
- Delivered **15× greater recommendation diversity** and **3× broader coverage** than history-based approaches, achieving **2× higher top-1 accuracy** by better capturing contextual relevance to user intent
- Validated system adaptation through **qualitative analysis**, confirming context-aware recommendations based on user mobility patterns and interaction timing (e.g., maps for commuters, travel apps for weekend users)

Data Analyst Intern

Jun 2024 – Aug 2024

PTKOREA (Advertising & Marketing Solutions)

Seoul, South Korea

- Managed 20+ daily user-reported issues on business performance dashboards via Jira/Tableau, improving stakeholder confidence
- Resolved dashboard data discrepancies with SQL/Excel/Adobe Analytics to deliver accurate **KPI** metrics for decision-making
- Collaborated with a cross-functional team of engineers and managers on QA testing, anomaly detection, and reliable deployment

Undergraduate Research Assistant

Aug 2022 – Dec 2023

C21U Lab (Supervisors: Dr. Jeonghyun Lee, Dr. Meryem Yilmaz Soylu)

Atlanta, GA

- Led 4 data scientists in classifying 1K+ student assessments by difficulty to help faculty design effective and data-driven evaluations
- Engineered reproducible data pipelines with text-based feature extraction (TF-IDF) to identify key terms for complexity modeling
- Enhanced Random Forest regression precision from **40%** → **65%** via feature engineering for reliable assessment estimates

Projects

LLM-Powered Job Recommendation and Optimization System

- Building an LLM-based job recommender combining semantic retrieval and Retrieval Augmented Generation (RAG) driven explanation to enhance person-job matching accuracy and interpretability
- Engineering an automated resume optimization pipeline leveraging LLM feedback and embedding-based scoring, enabling personalized improvement suggestions for job seekers

Implicit Emotion Classification with RoBERTa

- Boosted classification accuracy from **64%** → **88%** by integrating RoBERTa with a sentiment knowledge graph and applying soft-position embedding for smoother knowledge integration
- Improved classifier efficiency by reducing training time **20%** via EDA, feature selection and noise reduction with a visible matrix

Respiratory Diagnosis Assistant

- Developed a GRU-based respiratory diagnosis web application, integrating S3 and MongoDB for large-scale audio management, showcasing end-to-end software development from model to deployment
- Enhanced audio data augmentation (noise injection, pitch shifting, MFCC features) to improve accuracy from **70%** → **83%**, demonstrating a real-time, low-cost prototype for telemedicine and mobile health
